## **INTERMEDIATE M'19 EXAM**

**SUBJECT- ECONOMICS** 

Test Code –CIM 8156

(Date:)

Head Office : Shraddha, 3<sup>rd</sup> Floor, Near Chinai College, Andheri (E), Mumbai – 69.

Tel: (022) 26836666

#### **ANSWER-1**

(A)

Item	"Domestic"	"National"
(a) Value added by a <b>country's citizens</b> working	Excluded	Included
overseas, or firms/ corporations operating		
overseas		
(b) Value added by a <b>foreign citizen/ residents</b> , or	Included	Excluded
foreign firms/ corporations operating in a		
country		

(2 MARKS)

- (B) 1. There is a <u>strong relationship between money and price level</u>. So, quantity of money is the main determinant of the price level or the value of money.
  - 2. So, changes in the general level of commodity prices/ value/ purchasing power of money are determined by changes in the quantity of money in circulation.
  - 3. Higher the number of transactions that people want, higher will be the demand for money.(Transaction motive).
  - 4. Fisher did not specifically mention anything about the demand for money. However, the same is embedded in his theory as dependent on the <u>total value of transactions undertaken in the economy.</u>

(3 MARKS)

(C) Disposable income is the income which is left with the individuals after paying taxes to the government.

Disposable income = Personal income (-) Personal income taxes

(2 MARKS)

(D) Reserve money: Reserve Money can be computed in two ways as under – ( Note: Net result is the same in both)

Method 1: uses or liability approach	Method 2 : Sources or assets approach
Currency in circulation / held by the public	Net RBI credit to government
Add: Bankers' deposits with the RBI (Note)	
	Add: RBI credit to the commercial sector
Note: these are commercial banks deposits	Add: RBI's claims on banks
with RBI for maintaining Cash Reserve	Add: RBI's net foreign assets
Ratio(CRR) and as working funds for clearing adjustments.	<b>Add:</b> Government currency liabilities to the public
	Less: RBI's net non- monetary liabilities
Add: Other deposits with the RBI	
Reserve Money	Reserve Money

Note: In the above table, **Method 1** relates to the **liabilities** of the RBI and **Method 2** relates to **assets** of the RBI.

(3 MARKS)

#### **Answer 2**

- (A) Meaning: There is demand for Money primarily due to two reasons -
  - (i) People **desire** to hold money [called Liquidity Preference for Money]
  - (ii) Demand for Money is a decision about how much of one's given Stock of Wealth should be held in the form of Money rather than as other Assets like Land, Bonds, etc. even if it gives little or no Return.

OR

- (i) People wish to have <u>command over Real Goods and Services</u> with the use of Money [i.e. Derived Demand].
- (ii) Money is demanded for its <u>Purchasing Power</u>. Individuals, Households & Firms hold Money because it is liquid and offers the most convenient way to accomplish their day to day transactions.
- (a) Thus, Demand for Money is actually a <u>demand for Liquidity</u> and <u>demand to store</u> <u>Value</u>.
- (b) Demand for Money has an important role in the determination of Interest, Prices and Income in an Economy.

(4 MARKS)

# (B) Purposes of measuring National Income (Any Four point are required to answer from followings)

Measurement of National Income is important from the perspective of Governments, Research Scholars, Economists, Accountants, Business Entities, and aids their decision – making. The Following are the specific purposes –

- 1. To provide a complete <u>accounting and conceptual framework</u> for analysing and evaluating the short run performance of an economy.
- 2. To give a clear <u>picture of the Economy</u> regarding the GDP, National Income, Per Capita Income, Saving Ratio, Production, Consumption, Disposable Income, Capital Expenditure, etc.
- 3. To <u>evaluate</u> the living standards, Income Levels, Expenditure and Consumption patterns of the people.
- 4. To <u>indicate</u> the level of economic activity, economic development and aggregate demand for goods and services, i.e. to indicate the way in which an economy functions.
- 5. To help the Government in determining the National Priorities, such as Education, Inflation, Unemployment, Defence, Social Development, and Industrialisation, etc. in Long Term and Medium Term Planning.
- 6. To determine the <u>level of economic welfare</u>, i.e. the amount and distribution of National Income, Per Capita Income, and its growth over a period of time.
- 7. To inter relate different sectors of the Economy, and the significance of each Sector to the overall economy, by analyzing the composition and structure of National Income over various sectors, changes therein and the shifts in sectoral contribution over a period of time.

- 8. To provide a <u>quantitative database</u> for macro economic modelling and analysis, for (a) assessing and choosing economic policies, (b) objective evaluation of the chosen economic policies.
- 9. To determine the Monetary, Fiscal and Trade Policies towards growth, by using National Income data, along with financial and monetary data.
- 10. To make key projections on the future development of the economy at the macro level, i.e. **economic forecasting**.
- 11. To assess future consumption patterns and thereby determine the pattern of demand for goods and services, and enable Business Firms to forecast the demand for their products, at micro economic level.
- 12. To make <u>comparisons of structural statistics</u>, e.g. ratio of Investments, Taxes, Government Expenditure etc. to GDP, pattern of Income distribution, comparison with other world countries' data, etc.

#### **Answer 4**

(A)

#### **Significance of Measuring Money Supply**

Empirical Analysis of Money Supply is important for the following reasons -

- **1.** <u>Macro Economic Impact :</u> Money Supply is considered as a very important Macro Economic Variable responsible for changes in many other significant Macro Economic Variables in an Economy.
- 2. <u>Economic Stability</u>: <u>Economic Stability requires that the Supply of Money at any time</u> <u>should be maintained at an Optimum Level.</u> This can be achieved by accurately estimating the Stock of Money Supply on a regular basis, and appropriately regulating it in accordance with the Monetary Requirements of the Country.
- **3.** <u>Analysis</u>: Money Supply analysis facilitates analysis of Monetary Developments to provide a better understanding of the causes of Money Growth.
- **4.** <u>Monetary Policy</u>: Analysis of Money Supply is essential from the Monetary Policy viewpoint, as it provides a framework to
  - (a) Evaluate whether the Stock of Money is consistent with the Standards for Price Stability, and
  - (b) Understand the nature of deviations from this Standard.

Money Supply and Monetary Policy: The Central Banks all over the World adopt Monetary Policy to stabilize Price Level and GDP Growth by directly controlling the Supply of Money. This is achieved mainly by managing the Quantity of Monetary Base. The success of Monetary Policy depends to a large extent on the controllability of Money Supply.

#### Procedure:

Step	Description			
1.	Identify the Total Factor Payments made out by all Production Units within the			
	Domestic Territory of the Country, under the heads of – (a) Rent, (b) Wages, (c)			
	Interest, and (d) Profits.			
	Compute <u>Total Factor Incomes</u> within Domestic Territory = $NDP_{FC} = \sum factor$			
	payments as per Step 1 above.			
	For this purpose, NDP <sub>FC</sub> = Total of the following items –			
2.	(a) Operating Surplus = Rent + Interest + Profits (including Undistributed			
	Profits of Corporations).			
	(b) Compensation of Employees = Wages.			
	(c) Mixed Income of Self – Employed (as per Note below)			
3.	Compute National Income (i.e. NNP <sub>FC</sub> ) = NDP <sub>FC</sub> as per Step 2(+) Net Factor Income			
	from Abroad.			

**Note**: While applying Income Method, care must be taken to include "Mixed Income of the Self – Employed" in cases where –

- (a) individual provide both labour and capital services, and it is difficult to differentiate between Labour Element and Capital Element of Incomes, e.g. Doctors, Chartered Accountants, Proprietors, Traders, etc.
- (b) there is subsistence production or small commodity production etc.

#### **Answer 5**

(A)

1. In a Four Sector Economy (Households, Business, Government and Foreign Sectors), we have the equation,

Y = C + I + G + (X - M) = C + S + T, where

<u>C = Consumption, I = Investment, G = Govt. Spending, X = Exports, M = Imports, S = Savings</u> and T = Taxes.

- 2. Here, on the Aggregate Demand Side Y = C + I + G + (X M).
- 3. Substituting the values, we have Y = 700 + 0.8Y + 1,200 + Nil + 100.

**On Solving Y = 10,000.**

(C)

#### 1. Concept:

- (a) GDP<sub>MP</sub> is the measure of the Market Value of all final goods and services, without subtracting Depreciation, produced within the "domestic" territory of a country, in a specified time period (e.g. a year).
- (b) Thus, GDP<sub>MP</sub> is the Total Value Added by all producing units in the "domestic" territory, and includes value addition by Foreign Residents and Foreign Firms.
- **2. Computation**:  $GDP_{MP}$  = Value of Output in Domestic Territory (-) value of Intermediate Consumption.

Thus, GDP<sub>MP</sub> is the sum of Value Added in "Domestic Territory".

**Note:** GDP<sub>MP</sub> excludes the following items –

- (a) value Added/ Value of Output produced by a country's Citizens/ Firms abroad,
- (b) Transfer payments, e.g. Payments by Government towards Pensions, Unemployed Youth, etc.
- (c) Value of transactions which cannot be expressed in monetary form,
- (d) Non Reported Output, Value of illegal transactions, etc.
