## ANSWER-1

### ANSWER-A

$$(i) \text{ Re - order quantity} = \sqrt{\frac{2AO}{C \times i}}$$

$$= \sqrt{\frac{2 \times 7500 \times 12 \times 500}{60 \times 10}}$$

$$= 3,873 \text{ units}$$

$$(ii) \text{ Re-order level}$$

$$= \text{Maximum re-order period} \times \text{Maximum usage}$$

$$= 8 \text{ weeks} \times 750 \text{ units per week}$$

$$= 6,000 \text{ units}$$

$$(iii) \text{ Minimum stock level}$$

$$= \text{Re-order level} - \{\text{Normal usage} \times \text{Average reorder period}\}$$

$$= 6,000 - (500 \times 6.5)$$

$$= 2,750 \text{ units}$$

$$(iv) \text{ Maximum stock level}$$

$$= \text{Re-order level} + \text{Re-order quantity} - (\text{Minimum usage} \times \text{Minimum re-order period})$$

$$= 6,000 + 3,873 - (5 \times 250)$$

$$= 8,623 \text{ units}$$

$$(v) \text{ Average stock level}$$

$$= \frac{1}{2} (\text{Minimum stock level} + \text{Maximum stock level})$$

$$= \frac{1}{2} (2,750 + 8,623)$$

$$= 5,687 \text{ units}$$

(5\*1 = 5 MARKS)

### ANSWER-B

$$\text{Capacity Ratio} = \frac{\text{Actual Hours}}{\text{Budgeted Hours}} \times 100$$

$$75\% = \frac{\text{AH}}{6,000 \text{ units} \times 4 \text{ hour per unit}}$$

$$0.75 = \frac{\text{AH}}{24,000 \text{ hours}}$$

$$\text{AH} = 18,000 \text{ Hours}$$

$$\begin{aligned} \text{Efficiency Ratio} &= \frac{\text{Actual Output in terms of Standard Hours}}{\text{Actual Working Hours}} \times 100 \\ &= \frac{5,000 \text{ units} \times 4 \text{ hours per unit}}{18,000 \text{ hours}} \times 100 \\ &= \frac{20,000 \text{ Hours}}{18,000 \text{ Hours}} \times 100 = 111.11\% \end{aligned}$$

$$\begin{aligned} \text{Activity Ratio} &= \frac{\text{Actual Output in terms of Standard Hours}}{\text{Budgeted Output in terms of Standard Hours}} \times 100 \\ &= \frac{20,000 \text{ Units}}{6,000 \text{ Units} \times 4 \text{ hour per unit}} \times 100 \\ &= \frac{20,000 \text{ Units}}{24,000 \text{ Units}} \times 100 \\ &= 83.33\% \end{aligned}$$

[Rs. 500 (70,00,000/14,000) × 1,064]	
(1,217 + 14,000 – 14,153 = 1,064 units)	(5,32,000)
<b>Cost of Goods sold</b>	<b>70,76,500</b>
Distribution expenses (Rs. 16 × 14,153 units)	2,26,448
<b>Cost of Sales</b>	<b>73,02,948</b>
Profit (Balancing figure)	14,43,606
<b>Sales (Rs. 618 × 14,153 units)</b>	<b>87,46,554</b>

(10 MARKS)

### ANSWER-B

Break- even point (in units) is 50% of sales i.e. 12,000 units.

Hence, Break- even point (in sales value) is 12,000 units × Rs. 200 = Rs. 24,00,000

(i) We know that Break even sales =  $\frac{\text{Fixed cost}}{P/V\text{ratio}}$

$$\text{or Rs. 24,00,000} = \frac{\text{Fixed cost}}{25\%}$$

$$\text{or Fixed Cost} = \text{Rs. 24,00,000} \times 25\% = \text{Rs. 6,00,000}$$

So Fixed Cost for the year is Rs. 6,00,000

(ii) Contribution for the year = (24,000 units × Rs. 200) × 25% = Rs. 12,00,000

Profit for the year = Contribution – Fixed Cost

$$= \text{Rs. 12,00,000} - \text{Rs. 6,00,000} = \text{Rs. 6,00,000}$$

(iii) Target net profit is Rs. 11,00,000

Hence, Target contribution = Target Profit + Fixed Cost

$$= \text{Rs. 11,00,000} + \text{Rs. 6,00,000} = \text{Rs. 17,00,000}$$

Contribution per unit = 25% of Rs. 200 = Rs. 50 per unit

$$\text{No. of units} = \frac{\text{Rs. 17,00,000}}{50 \text{ per unit}} = 34,000 \text{ unit}$$

So, 34,000 units to be sold to earn a target net profit of Rs. 11,00,000 for a year.

- (iv) Net desired total Sales (Number of unit x Selling price) be X , then desired profit is 25% on Cost or 20% on Sales i.e. 0.2X

$$\text{Desired Sales} = \frac{\text{Fixed cost} + \text{Desired profit}}{P/V \text{ratio}}$$

$$X = 6,00,000 + 0.2X / 25\%$$

$$\text{or, } 0.25 X = 6,00,000 + 0.2 X$$

$$\text{or, } 0.05 X = 6,00,000 \text{ or,}$$

$$X = \text{Rs. } 1,20,00,000$$

$$\text{No. of units to be sold} = 1,20,00,000 / 200 = 60,000 \text{ units}$$

- (v) If Break- even point is to be brought down by 4,000 units then Break-even point will be 12000 units – 4000 units = 8000 units

$$\text{Fixed Cost} = \text{Rs. } 6,00,000$$

$$\text{Required Contribution per unit} = 6,00,000 / 8,000 \text{ unit} = \text{Rs. } 75$$

$$\text{Selling Price} = \text{Contribution per unit} / P/V \text{ratio} = \text{Rs. } 75 / 25\% = \text{Rs. } 300 \text{ per unit}$$

Hence, selling price per unit shall be Rs. 300 if Breakeven point is to be brought down by 4,000 units.

**(5\*2 = 10 MARKS)**

### **ANSWER-3**

### **ANSWER-A**

#### **Operating Cost Sheet**

Fixed Cost:

Salaries 800 x 12 Rs. 9,600

Gate-keepers 10 x 200 x 12 24,000

Operators 2 x 400 x 12 9,600

Clerks 4 x 250 x 12 12,000

Administration Expenses 18,000

Depreciation:

Premises Rs. 6,00,000 ÷ 15 40,000

Projector and Equipment 3,20,000 x 0.10 32,000

Total Fixed Cost 1,45,200

Variable Costs:

Electricity and oil 11,655

Carbon	7,235
Misc. expenses	5,425
Advertisements	34,710
Hire of print	<u>1,40,700</u>
Total variable costs	<u>1,99,725</u>
Total cost	3,44,925
Add: 30% return on gross proceeds or 3/7 of cost	<u>1,47,825</u>
Gross Proceed	<u>4,92,750</u>
Total man-shows (refer to calculation below)	<u>9,85,500</u>
Cost per man-show	Re.0.50

Rate for each class:

Janata cost per man-show x weightage i.e.,  $0.50 \times 1 = \text{Re. } 0.50$

Sanman cost per man-show x weightage i.e.,  $0.50 \times 2 = \text{Re. } 1.00$

Lord's cost per man-show x weightage i.e.,  $0.50 \times 3 = \text{Rs. } 1.50$

Computation of man-shows :

No. of seats : Janata = 250 seats

Sanman circle = 250 seats

Lord's circle = 125 seats

With weightage (i.e., express all seats in terms of Janata)

Janata  $250 \times 1 =$  250 seats

Sanman circle  $250 \times 2 =$  500 seats

Lord's circle  $125 \times 3 =$  375 seats

1,125 seats

No. of shows: 3

$\therefore$  Total weighted seats =  $1,125 \times 3 =$  3,375 seats

Less : 20% vacant seats 675

2,700

Man-shows per annum =  $2,700 \times 365 =$  9,85,500

**(8 MARKS)**

**Notes :**

1. Management expects 30% return on gross proceeds

Gross Proceeds 100

Return 30% 30

It means relation to return to cost = 3/7

2. In this question, it is necessary to understand weightage concept. Whenever weightage is given, express the items having higher weightage in terms of item having lowest weightage so that all items can be expressed equally.

(2 MARKS)

**ANSWER-B**

**Workings:**

	<b>Skilled</b>	<b>Unskilled</b>
Standard Rate per hour	80	60
Standard time for producing one unit	1.5 hours (Rs.120 ÷ Rs.80)	1.5 hours (Rs.90 ÷ Rs.60)
Actual hours paid (AH <sub>Paid</sub> )	6,600 hours	5,400 hours
Standard hours required to produce 4,000 units (SH)	6,000 hours (1.5 hours × 4,000 units)	6,000 hours (1.5 hours × 4,000 units)
Actual hours worked (AH <sub>Worked</sub> )	$\frac{6,600}{100} \times 97.5$ = 6,435 hours	$\frac{5,400}{100} \times 97.5$ = 5,265 hours
Revised Std. Hours (RSH)	$\left( \frac{6,600 + 5,400}{100} \times 97.5 \right) \times 0.5$ = 5,850 hours	$\left( \frac{6,600 + 5,400}{100} \times 97.5 \right) \times 0.5$ = 5,850 hours
Idle time <sub>Abnormal</sub>	6,600 - 6,435 = 165 hours	5,400 - 5,265 = 135 hours

(3 MARKS)

**(7\*1 = 7 MARKS)**

**ANSWER-4**

**ANSWER-A**

- (i) Statement showing total cost of each product assuming absorption of overheads on Machine Hour Rate Basis.

Particulars	A	B	C	D	Total
Output (units)	100	110	120	150	480
Direct material (Rs.)	30	40	35	45	150
Direct Labour (Rs.)	25	30	30	40	125
Direct labour- Machine hrs	5	4	3	4	
Overhead @ Rs. 30/- per Machine hr	150	120	90	120	480
Total cost per unit (Rs.)	205	190	155	205	755
Total cost (Rs.)	20,500	20,900	18,600	30,750	90,750

$$\text{Overhead Rate} = \frac{\text{Total overhead costs}}{\text{Total MHrs.}} = \frac{Rs.57,000}{1,900} = Rs. 30 \text{ per unit}$$

<u>Total Overheads</u>	Rs.		
Factory works expenses	22,500	Factory exp per unit	$22,500 / 1,900$ = Rs. 11.84
Stores receiving cost	8,100	Stores receiving cost	$8100 / 100$ = Rs. 81
Machine set up costs	12,200	Machine set-up cost	$12,200 / 48$ = Rs. 254.1
Costs relating to quality control	4,600	Cost relating to QC	$4,600/48$ =Rs. 95.83
Expense relating to material handling & dispatch	9,600	Material handling & dispatch	$9,600 / 96$ = Rs. 100/-
<b>Total</b>	<b>57,000/-</b>		

(5 MARKS)

**Statement showing total cost of each product assuming activity based costing**

Particulars	A	B	C	D	Total
Output (Units)	100	110	120	150	480
No. of production runs	10	11	12	15	48
No. of stores requisition	25	25	25	25	100
No. of sales orders	20	22	24	30	96
Unit costs - Direct material (Rs.)	30.00	40.00	35.00	45.00	
Unit costs - Direct labour (Rs.)	25.00	30.00	30.00	40.00	
Unit costs - Factory works expenses (Rs.)	59.20	47.36	35.52	47.36	
Unit costs - Stores receiving cost (Rs.)	20.25	18.41	16.88	13.50	
Unit costs - Machine set-up cost (Rs.)	25.42	25.42	25.42	25.42	
Unit costs – QC (Rs.)	9.58	9.58	9.58	9.58	
Unit costs – Material Handling (Rs.)	20.00	20.00	20.00	20.00	
Unit cost (Rs.)	189.45	190.77	172.40	200.86	
Total cost (Rs.)	18,945	20,984.7	20,688.00	30,129	

**Statement showing differences (in Rs.)**

Particulars	A	B	C	D
Unit cost MHR	205	190	155	205
Unit cost ABC	189.45	190.77	172.40	200.86
Unit cost - difference	15.55	-0.77	-17.40	4.14
Total cost MHR	20,500	20,900	18,600	30,750
Total cost ABC	18,945	20,985	20,688	30,128

The difference is that A consumes comparatively more of Machine hours.

The use of activity based costing gives different product costs than what were arrived at by utilising traditional costing. It can be argued that Product costs using ABC are more precise as overheads have been identified with specific activities.

- (ii) Statement of profitability at the split off point

Product	Selling price of split off	Output in units	Sales value at split off point	Share of joint cost	Profit at split off point
ACH	15.00	8,000	1,20,000	98,667	21,333
BCH	6.00	4,000	24,000	19,733	4,267
CSH	3.00	2,000	6,000	4,933	1,067
DSH	7.50	4,000	30,000	24,667	5,333
			1,80,000	1,48,000	32,000

**Note :** Share of Joint Cost has been arrived at by considering the sales value at split off point.

**(2.5 MARKS)****ANSWER-C****Determination of quotation price for the job**

Cost	(Rs.)
Direct Material (10 Kg × Rs.10)	100
Direct Labour (20 hrs. × Rs. 5)	100
Variable production overhead (20 hrs. × Rs. 2)	40
Fixed Overhead $\left(\frac{\text{Rs.1,00,000}}{10,000 \text{ budgeted hours}} \times 20 \text{ hours}\right)$	200
Other costs	50
<b>Total Costs</b>	<b>490</b>

Net Profit is 30% of sales, therefore total costs represent 70% (Rs. 490 × 100) ÷ 70 = Rs. 700 price to quote for job.

To check answer is correct; profit achieved will be Rs. 210 (Rs. 700 – Rs. 490) = Rs. 210 ÷ Rs. 700 = 30%.

## ANSWER-6

### ANSWER-A

The essential features, which a good cost and management accounting system should possess, are as follows : **(ANY FIVE)**

- (i) **Informative and simple** : Cost and management accounting system should be tailor – made, practical, simple and capable of meeting the requirements of a business concern. The system of costing should not sacrifice the utility by introducing meticulous and unnecessary details.
- (ii) **Accurate and authentic** : The data to be used by the cost and management accounting system should be accurate and authenticated; otherwise it may distort the output of the system and a wrong decision may be taken.
- (iii) **Uniformity and consistency** : There should be uniformity and consistency in classification, treatment and reporting of cost data and related information. This is required for benchmarking and comparability of the results of the system for both horizontal and vertical analysis.
- (iv) **Integrated and inclusive** : The cost and management accounting system should be integrated with other systems like financial accounting, taxation, statistics and operational research etc. to have a complete overview and clarity in results.
- (v) **Flexible and adaptive** : The cost and management accounting system should be flexible enough to make necessary amendments and modification in the system to incorporate changes in technological, reporting, regulatory and other requirements.
- (vi) **Trust on the system** : Management should have trust on the system and its output. For this, an active role of management is required for the development of such a system that reflect a strong conviction in using information for decision making.

## ANSWER-C

### Just in Time (JIT) Inventory Management

JIT is a system of inventory management with an approach to have a zero inventories in stores. According to this approach material should only be purchased when it is actually required for production.

JIT is based on two principles

- (i) Produce goods only when it is required and
- (ii) the products should be delivered to customers at the time only when they want.

It is also known as 'Demand pull' or 'Pull through' system of production. In this system, production process actually starts after the order for the products is received. Based on the demand, production process starts and the requirement for raw materials is sent to the purchase department for purchase. This can be understood with the help of the following diagram :

## ANSWER-D

**Job costing** : In this method of costing, cost of each job is ascertained separately. It is suitable in all cases where work is undertaken on receiving a customer's order like a printing press, motor work shop, etc. This method of costing is used for non – standard and non – repetitive products produced as per customer specifications and against specific orders. Jobs are different from each other and independent of each other. Each Job is unique.

**Batch Costing** : It is the extension of Job costing. Homogeneous products are produced in a continuous production flow in lots. A batch may represent a number of small orders passed through the factory in batch. Each batch here is treated as a unit of cost and thus separately costed. Here cost per unit is determined by dividing the cost of the batch by number of units produced in the batch.
