(i) Conservative estimate of profit for the management

= 2/3 x Notional Profit x
$$\frac{\text{Cash Received}}{\text{Value of Work of certified}}$$

= 2/3 x Rs.6,54,050 x $\frac{\text{Rs.14,75,250}}{\text{Rs.21,07,500}}$ =Rs.3,05,223

(ii) When the management of Hut-to-Palace appreciates the fact that the contractee is having liquidity crunch and it may not be able to pay further cash Payment. In this situation, following the concept of conservatism it has to recognise loss if any immediately i.e.

Cash Received - Expenditure to date = Profit/(Loss)Rs. 14,75,250 - Rs. 17,64,525 = (Rs.2,89,275)

Production will increase by 60% but efficiency will decline by 10%.

160 - 10% of 160 = 144%

So increase by 44%. (1 Mark)

Note: If we consider that variable overhead once will change because of increase in production (From Rs. 2,50,000 to Rs. 4,00,000) then with efficiency declining by 10% it shall be Rs. 3,60,000 and then again as mentioned in point No. (iii) of this question it will increase by 60% then variable overhead shall be Rs. 3,60,000 x 160% = Rs. 5,76,000. Hence, total costs shall be Rs. 37,52,320 and profit shall be 1/9th of Rs. 37,52,320 = Rs. 4,16,924. Thus, selling price shall be Rs. 41,69,244.
